Professional Summary

Final-year Electronics and Communication Engineering student (graduating 2027) who builds full-stack and Generative AI apps with Python, FastAPI, Next.js and PostgreSQL. Has built RAG and multi-agent projects and two hackathon prototypes. Looking for a remote AI / full-stack engineering internship or entry-level role; available to start immediately.

Technical Skills

Languages: Python, TypeScript, JavaScript, Solidity
Frontend: React, Next.js, Tailwind CSS, Framer Motion
Backend & Databases: FastAPI, REST APIs, JWT Authentication, PostgreSQL, SQLAlchemy, Supabase
AI & Generative AI: RAG, LangChain, CrewAI, OpenAI API, FAISS, Vector Embeddings, Semantic Search, Prompt Engineering, AI Agents
Tools: Git, GitHub, Docker, Swagger, Postman
Familiar with: C++, Java, Node.js, Express.js, MongoDB, Pinecone, LangGraph, OAuth

Education

JSSATE-B — Bengaluru, Karnataka
B.E. in Electronics and Communication Engineering CGPA: 8.26/10 — *2023 – 2027*

Rajendra Vidyalaya — Jamshedpur, Jharkhand
Class XII – Physics, Chemistry, Mathematics Score: 85% — *2023*

Projects

Skill Swap | *Next.js, TypeScript, Supabase Realtime, PostgreSQL* — Live Demo | GitHub

- Built a hyperlocal platform where people in a neighborhood swap skills, with real-time messaging, notifications, media uploads and a feed scoped to the user's neighborhood.
- Added ratings, reviews, blocking, reporting, invite links and a leaderboard so users can decide who to trust; tried with **5 test users**.
- Kept messages, notifications and feed updates in sync across users with PostgreSQL-backed real-time data (Supabase Realtime), and deployed the app on Vercel.

ExpenseAI | *FastAPI, PostgreSQL, JWT, OpenAI API* — GitHub

- Built the backend with FastAPI and PostgreSQL: JWT authentication and **19 REST endpoints** covering expenses, profiles, budgets and reports, documented in Swagger.
- Integrated the OpenAI API for automatic expense categorization, AI-generated spending insights and an AI chat assistant.
- Designed the PostgreSQL schema for users and expenses; added overall and per-category budgets and a report-generation endpoint.

Job Application Assistant | *CrewAI, LangChain, OpenAI API* — GitHub

- Built a multi-agent workflow where agents run in sequence: parse a resume PDF, retrieve outside information on the role, and write a personalized job application.
- Produces a complete application in **under 10 seconds**; tested on **under 10 real job descriptions**.
- Combines the retrieved company and role information with OpenAI API generation, so each application is written for that specific role instead of filled into a template.

Hackathons

TetherX | **Top 10 of 70+ teams nationally** — 6 Mar. – 7 Mar., 2026
VIT-C — *Chennai, Tamil Nadu*

- Built a multilingual AI healthcare assistant for symptom guidance and medical report analysis, using FastAPI, LangChain, OpenAI API, SarvamAI, RAG and FAISS; **supports more than 18 languages**.
- Added speech-to-speech interaction with SarvamAI so users can talk to the assistant in their own language.

Smart India Hackathon — 25 Sept. – 18 Nov., 2025
JSSATE-B — *Bengaluru, Karnataka*

- Wrote a Solidity smart contract for a farmer-focused decentralized platform: token rewards, per-user daily limits and abuse-prevention logic.

Achievements

Essentials: Your First Workflows – n8n Academy — Aug. 2026 | Certificate
Claude 101 – Anthropic — July 2026 | Certificate
Full Stack Generative and Agentic AI with Python – Udemy — Dec. 2025 | Certificate
32.5 hours | Instructors: Hitesh Choudhary, Piyush Garg
Oracle Cloud Infrastructure 2025 Certified Generative AI Professional – Oracle — Oct. 2025 | Verify
